

JOINT LIGHT TACTICAL SHELTER (JLTS)

*Shelter for the Joint Light
Tactical Vehicle (JLTV)*

A force multiplier for the Joint Light Tactical Vehicle (JLTV), the Joint Light Tactical Shelter (JLTS) is a state-of-the-art mobile shelter solution for the JLTV. Engineered for durability and operational efficiency, the JLTS features lightweight, robust composite walls and an innovative roof system that can be extended up to create a spacious interior for up to five personnel to comfortably stand and operate.

When stowed, the JLTS roof is just 66" tall – a profile that supports the JLTV's high maneuverability in tight, demanding environments. The design allows for transport on C-130 aircraft and other tactical airlift platforms, ensuring rapid deployment and mobility across different theaters of operation. Installation of the JLTS is fast and user-friendly, requiring no specialized tools or modifications to the JLTV chassis and allows for quick setup in the field, significantly reducing logistical complexity and minimizing downtime.

The JLTS is built with modular adaptability in mind. Its design can accommodate a variety of mission-specific configurations, from (FDC) Fire Direction Control centers, (C2) Command Post and S-6 server stations. Optional accessories and integrated power allow for seamless integration of mission-critical equipment, expanding the shelter's functionality for both tactical and operational needs.

Designed for extreme environments, the JLTS provides durable protection in harsh weather conditions, including high heat, cold, and heavy rain. Superior insulation and structural integrity ensure that mission personnel and sensitive equipment are shielded from the elements.

KEY FEATURES

- Lightweight - under 1,400 lbs.
- C-130 transportable while mounted on JLTV
- Expandable roof
- No modification or specialty tools required for integration
- Mounts one 18,000 BTU ECU
- Available in two variants for operational flexibility
